-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The information disclosure statement filed February 6, 2004 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the non-patent literature publication referred to therein has not been considered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Timpany.

Timpany discloses a method including the steps of introducing a waste activated sludge effluent (372; 382; col. 4, lines 41-46) into a first cell, treating said effluent aerobically in said first cell (301) for a first predetermined period of time and anaerobically for a second predetermined period of time (col. 9, lines 14-19), treating said effluent aerobically in said second cell (302) for a third predetermined period of time and anaerobically for a forth predetermined period of time (col. 9, lines 14-19),

Art Unit: 1724

moving said effluent into a third cell (303), treating said effluent aerobically in said third cell for a fifth predetermined period of time and anaerobically for a sixth predetermined period of time (col. 9, lines 26-31), and reclaiming said effluent as water.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Edwards.

Edwards discloses a method including the steps of introducing a waste activated sludge effluent into a first cell, treating said effluent aerobically in said first cell for a first predetermined period of time and anaerobically for a second predetermined period of time. Edwards does not disclose using two more cells with both having aerobic and anaerobic time periods.

It is submitted that it is conventional in the art to provide a plurality of similar-functioning cells in order to, for example, provide a higher degree of contaminant degradation. Accordingly, it would have been readily obvious for the skilled artisan to modify the invention of Edwards such that it includes the steps of using two more cells with both having aerobic and anaerobic time periods in order to, for example, provide a higher degree of contaminant degradation, as known in the art.

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References are cited of interest to show the state of the art.
